

COUNTERPOINT QUALITY AND RELIABILITY PROGRAM

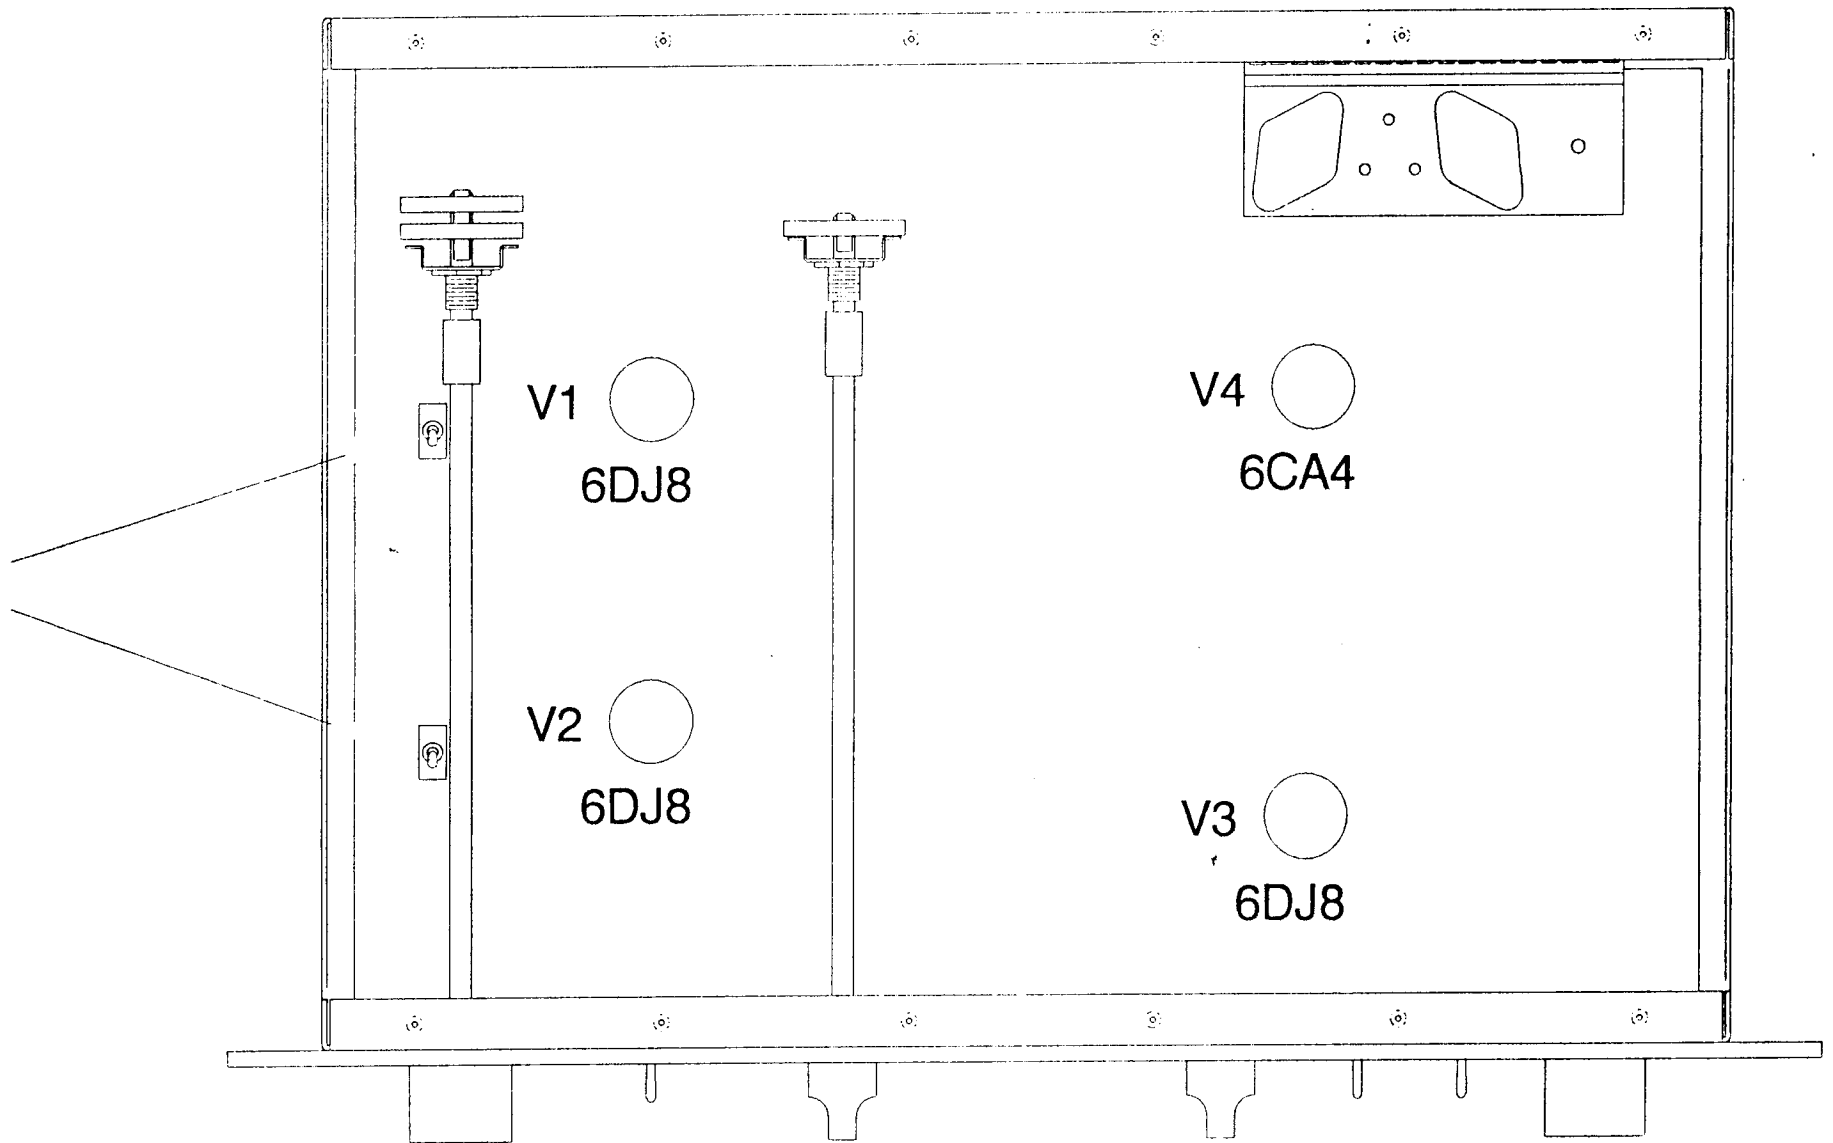

Counterpoint is committed to the philosophy that quality must be built into a product and not achieved only through inspection. Counterpoint has designed and implemented a complete Quality and Reliability Program to insure that Counterpoint's products meet or exceed the expectations of our customers.

Counterpoint's Quality and Reliability Program contains numerous audit points to insure the

quality of each process. Stringent electrical, mechanical, environmental as well as sonic tests are run with 100% of all items in a production lot. Only after successful completion of each step in the program will Counterpoint put our mark on a component. The end result: a superior product for you, the customer.
